Pippa

Research Capabilities

Pippa Research · Pippa LLC

The technology partner for grant-funded digital health research. We build, operate, and document study software so university investigators can focus on the science.

What we provide

- **Existing platform:** Pippa patient iOS and Android apps and a clinician web dashboard, operating in outpatient eating-disorder care.
- **Research configuration:** care approach and per-feature controls set per study arm; no calorie, weight, or score feedback in the patient view.
- **Frozen, versioned builds:** locked before enrollment, with a written change log after.
- **Consent and privacy:** consent-gated clinician access, guardian consent for minors, least-privilege access, encryption, audit logging, staged deletion.
- **Engagement data:** use and adherence recorded as the app runs; de-identified exports with a data dictionary.
- **Operations:** hosting, app store releases, monitoring, and participant technical support for the award period.

Research areas

Eating-disorder recovery
Digital adjuncts to outpatient treatment such as family-based treatment and CBT-E.

ARFID and food exposure
Clinician-guided repeated food exposure with an all-time record of foods tried.

Clinician workflow
Measurement-based care and review burden per patient-week.

Family involvement and safety by design
Scoped caregiver access; non-numeric patient experiences and distress escalation.

Partnering roles

- **STTR applicant** with a university research institution leading the science
- **SBIR applicant** with university consultants or subawards
- **Subaward or contractor** on investigator-initiated grants
- **Technology partner** on foundation grants

For the application

- Technical, data handling, and facilities sections
- Budget inputs and work-share figures
- Signed letter of support
- Product figures made with demonstration data

Organization

Legal name	Pippa LLC
Business type	LLC, small business
Product site	getpippa.app
In preparation	NIH STTR Phase I application with a university research partner
